

Website Deep Assessment

Example Client LLC | example-client.com | 2026-07-27

Prepared for the customer | Evidence-based review | Not a certification

Site: https://example-client.com
Locales reviewed: en
Assessor: Cybercon Solutions
Scope: SEO, speed, privacy policy, cookie consent, accessibility (WCAG), security, GDPR, CCPA, ADA / Section 508.

1. Executive summary

The public site presents clearly and loads with a workable mobile layout, but search metadata, cookie consent, and form privacy disclosures need attention before a broader marketing push. Accessibility basics are partly in place; several interactive controls lack visible focus and name clarity. Security headers and TLS look sound for a brochure site. This is a sample packet - replace with live evidence for a real engagement.

2. Scorecard

Grades A-F reflect evidence gathered in this pass. N = not assessable yet (missing surface, market scope, or measurement).

Area	Grade	Note
SEO	C	Thin meta descriptions; missing sitemap discovery path
Speed	B	Acceptable LCP on mid-tier mobile; hero not prioritized
Privacy policy	C	Policy exists but outdated contact and form coverage
Cookie consent	D	Analytics load before choice
Accessibility (WCAG)	C	Focus and link-name gaps on primary CTAs
Security	B	HTTPS + HSTS; tighten CSP later
GDPR	N	EU traffic not confirmed - needs discovery
CCPA	C	No clear "Do Not Sell / Share" path if ads run
ADA / Section 508	C	Same WCAG barriers; no Section 508 claim needed yet

3. Priority fixes

1. [HIGH] Gate marketing cookies until consent

Defer analytics and ad tags until the visitor accepts non-essential cookies; keep a reject path as easy as accept.

2. [HIGH] Refresh privacy policy + form notices

Name processors, retention, and how to exercise California privacy rights; link the notice next to every lead form.

3. [MEDIUM] Fix CTA link names and keyboard focus

Replace bare "Learn more" with destination topics; ensure a 2px visible focus ring on interactive controls.

4. Evidence by area

SEO (C)

Titles exist on the homepage but several service URLs share near-duplicate descriptions.

[MEDIUM] Duplicate meta descriptions

Evidence: Three service templates reuse the same 140-character description.

Recommendation: Write unique descriptions that name the service and locality.

Speed (B)

Lab LCP is roughly in the "needs improvement" band on mobile; images are the main weight.

[MEDIUM] Hero image not prioritized

Evidence: LCP candidate is lazy-loaded and not preloaded.

Recommendation: Use fetchpriority="high" on the LCP image; preload the format the picture element selects.

Privacy policy (C)

A privacy page is linked in the footer but still references an old phone number.

[HIGH] Stale contact details

Evidence: Privacy page lists a disconnected phone for privacy requests.

Recommendation: Update contact channels and document form processors.

Cookie consent (D)

Third-party tags fire on first paint.

[HIGH] Analytics before consent

Evidence: Network log shows analytics beacon before banner interaction.

Recommendation: Load non-essential scripts only after affirmative consent.

Accessibility (WCAG) (C)

Structure is mostly semantic; interaction polish is missing.

[MEDIUM] Bare "Learn more" links

Evidence: Four identical anchors in the services grid.

Recommendation: Include the destination topic in each accessible name.

Security (B)

TLS and HSTS are present; contact form posts over HTTPS.

[LOW] No Content-Security-Policy yet

Evidence: Response headers omit CSP.

Recommendation: Add a staged CSP after inventorying third parties.

GDPR (N)

Insufficient evidence of EU residents as a primary audience.

[INFO] Scope not confirmed

Evidence: No geo or market data provided for this sample.

Recommendation: Confirm EU traffic and processing roles before claiming GDPR readiness.

CCPA (C)

California rights language is thin if advertising pixels are in use.

[MEDIUM] Missing consumer request path

Evidence: Privacy page lacks a clear Do Not Sell/Share or request method.

Recommendation: Add a request channel and document ad/analytics sharing.

ADA / Section 508 (C)

Public-facing barriers track the WCAG findings; no government-specific claim required for this sample.

[MEDIUM] Task-blocking focus gaps

Evidence: Primary CTA loses visible focus in Chrome keyboard nav.

Recommendation: Restore a visible focus indicator and retest the lead form path.

5. Recommended next step

Schedule a Cybercon free assessment follow-up to turn these fixes into a sequenced remediation plan on Web Design & Development.

Cybercon Solutions

Managed IT, cybersecurity, cloud, AI, and web for South Florida businesses.
